HOW TO USE A COMPUTERIZED TELESCOPE: PRACTICAL AMATEUR ASTRONOMY VOLUME 1 BY MICHAEL A. COVINGTON PDF

How to Use a Computerized Telescope describes how to get a computerized telescope up-and-running, and how to embark on a program of observation. Michael Covington explains in detail how the sky moves, how a telescope tracks it, and how to get the most out of any computerized telescope. Packed full of practical advice and tips for troubleshooting, his book gives detailed instructions for three popular telescopes: the Meade® LX200, Celestron® DCC NexStar 5 and 8, and Meade® Autostar® DTM (ETX and LX90). Michael A. Covington is an associate research scientist at the University of Georgia. He is a computational linguist trained in the computer processing of human language and the computer modeling of human logical reasoning, and a widely recognized expert on the Prolog programming language. He is the author of nine books including Dictionary of Computer and Internet Terms, Seventh Edition (Barron's, 2000), Astrophotography for the Amateur (Cambridge, 1999), PROLOG Programming in Depth (Simon & Schuster, 1996), Cambridge Eclipse Photography Guide (1993), and Syntactic Theory in the High Middle Ages (Cambridge, 1985). A senior member of the Institute of Electrical and Electronics Engineers, Covington is a Contributing Editor to, and former "Q&A" columnist of, Poptronics magazine.

Useful book for those new to goto scopes

By Lawrence Maturo

If you have a goto scope it's very useful. I have a Celestron NexStar goto telescope, and have bought a book specific to NexStar scopes, and I still found this one helpful, especially on alignment.

Very helpful book

By Little Old Granny

I recently purchased a Celestron StarSeeker telescope (basically a NexStar80) so wanted to read more about computerized telescopes. Michael Covington's book is very good. He starts by saying "Welcome to amateur astronomy". The first part of the book then goes on to discuss telescopes in general, such as the different types (ie, refractors, reflectors and catadioptric) and much very helpful general information about observational astronomy. Things like celestial coordinates, how a telescope works, etc. Too much to put in this review but I found the information extremely helpful. The second section is about astrophotography including simple ways to do astrophotography without a lot of expensive equipment. This author also has a book on Astrophotography which I haven't read. He refers to it several times in this section of this book. The last section describes in quite a bit of detail the operation of 3 computerized telescopes, the Meade LX200, Celestron NexStar 5 and 8 and two Meade telescopes with Autostar, the ETX 90 and the LX 90. All of these telescopes are now outdated as both Meade and Celestron have newer models. However, what is said in this section would apply to the newer models to a large extent. Overall I enjoyed reading this book and obtained a lot of useful information and recommendations to start my budding career in amateur photography. One further note; there is another book by Michael Swanson that deals with just the Celestron NexStar telescopes. I have this book also but haven't finished reading it. If you are just interested in computerized telescopes in general, I would recommend the one in this review. If you have or are interested in a Celestron, then I would suggest the Michael Swanson book; actually I would recommend both.
