It's "the BOMB!"

By zingara

I'll start by telling you that I was an after-school caregiver/tutor and a substitute teacher, before becoming a homeschooling mom. This is an excellent book! My son is 8 years old, but an advanced learner. I was so happy to find something that was for 4-5th grade because that's exactly where he's at with his studies! The everyday speed drills have really improved how quickly he performs multiplication problems, and because they're on every page: he PLANS-ON and ENJOYS testing himself everyday! And I'll admit: I have never been a math genius (yes, that means I've been the exact opposite! LOL), but even I've learned all the things I never understood when I was a kid trying to learn math! I love working out fractions!!

One warning: if your child answers something incorrectly according to the answers in back, you may want to work the problem out for yourself, just to be sure. I have found a few wrong answers in back, of which I've already emailed the publisher. But don't let that deter you: it's an excellent program and I can't wait to purchase other books from this series! Hmm..."Word Problems"...LOL

I have a daughter who went to public school through ...

By MsJones

I have a daughter who went to public school through third grade before we began homeschooling. The way math was taught in public school was confusing to her. When I would attempt to teach her at home with her homework, using the methods that have been used for hundreds of years, she would cry and say that her teacher says that's the wrong way. In a teacher conference her teacher even expressed frustration saying that with common core, they were expected to teach children using concepts that didn't make sense and only made math more confusing than it should be. The "Old Way" what most of us know as the "Normal Way" is no longer acceptable in public schools.

Once we began homeschooling we spent two years struggling to un-learn what she had been taught in math. We finally found this book. She was able to zip through it very quickly because the instruction is so clear and concise. She started this book with the idea that she was to forget everything she had ever learned in math and only do what she was taught in this book.

She just did a standardized test after being homeschooled for 3 1/2 years (We are not required to test but I was curious how we were doing). She had previously struggled to be on grade level (5th grade, we repeated 3rd). She just tested on the 10th grade level in Math!!! I am so relieved! We will be starting the next book soon.

My son, who has autism spectrum disorder and has never been to public school, (2nd grader) is starting this book now. He has had no problem understanding any of the lessons so far.

I had always been bad at math

By *Sandie*

I had always been bad at math, when I was younger. Now as an adult going back to school I have some entry exams. This book has just been the light switch that turned My light bulb in my head On.

I have realized that I am not bad at math , just had teachers who never knew how to teach it very well.

When I use this book and the online free tutoring videos, I actually learn and feel good about finally understanding what I am supposed to do.

I tried other math books but wasnt doing well. I would recommend this book to anyone who needs some help with math or even for the person who thought they couldnt do math but have exams or other need for mastering math.

Every page is written clearly and at the back of this book you will find the answers to every practice by its specific page.

We all learn in different ways , but no matter how we reach our goal it feels good to know that this book could be that one.
